

Mohammad Mahmudul Hasan

Azimpur Govt. Colony, Dhaka, Bangladesh

 [GitHub](#) | [LinkedIn](#)

Experienced in API development, system security, cloud computing and scalable architectures. Skilled in building secure and high-performance solutions for FinTech, Telecom and Enterprise applications. Passionate about problem-solving, open-source contributions and mentoring to drive efficiency and innovation.

PROFESSIONAL EXPERIENCE

SSL Wireless

New Eskaton, Dhaka, Bangladesh

Software Analyst (Senior Software Engineer)

FEBRUARY 2024 - PRESENT

Led the development and optimization of Admin and Merchant Panels for SSLCommerz, Bangladesh's leading payment gateway. I design and implement scalable APIs, FinTech features and ERP solutions to ensure seamless financial operations, real-time reporting and security enhancements. My role also involves system analysis, performance assessment and business process automation.

Key Responsibilities:

- **Admin & Merchant Panel Development** – Designed and maintained FinTech-focused dashboards for SSLCommerz.
- **Financial API Development** – Developed secure RESTful APIs using Laravel for transaction tracking, merchant operations and settlement processing.
- **Distribution ERP System** – Built mobile and web APIs to support reporting (products, staff, activity) and resource management.
- **Automated Reporting System** – Implemented instant and scheduled reports for data-driven decision-making.
- **User Activity Monitoring** – Designed real-time tracking dashboards for security, fraud detection and performance optimization.
- **System Analysis & Performance Assessment** – Conducted evaluations to enhance transaction speed and operational efficiency.

Key Achievements:

- Optimized for enhancing security and transaction efficiency.
- Improved merchant experience, leading to higher adoption and retention rates.
- Developed an advanced reporting system in the Distribution ERP, improving decision-making efficiency.
- Seamlessly handled data migration and integration, ensuring scalability and stability.

Portonics Limited

Gulshan 1, Dhaka, Bangladesh

Software Engineer

OCTOBER 2018 – JANUARY 2024

At Portonics Limited, I specialized in API development, system optimization and microservices architecture, primarily for leading telecom companies. I designed scalable APIs, integrated third-party services and developed enterprise-grade automation and monitoring solutions, ensuring seamless digital experiences for high-traffic applications.

Key Responsibilities:

- **RESTful API Development** – Built custom framework-based APIs powering mobile and web platforms.
- **Third-Party API Integration** – Integrated external services (JSON/XML) to enhance telecom and digital payment features.
- **Microservices Architecture** – Designed modular service components, ensuring scalability and low-latency performance.
- **Automated Service Monitoring** – Developed real-time monitoring tools using Laravel, PHP, Bash and Graph/UI/Alert.
- **Telecom-Specific Feature Development** – Engineered request-response lifecycle logic and custom business logic.
- **Asset Management System (CMS)** – Created a scalable asset tracking solution using Laravel.
- **Game Logic Implementation** – Designed interactive modules for user engagement and revenue generation.
- **Deployment & System Analysis** – Managed manual and automated deployments, optimizing network and server performance.

Key Achievements:

- Developed and optimized high-traffic modules, ensuring seamless performance at scale.
- Implemented robust security measures, safeguarding telecom data and API transactions.
- Improved network performance, reducing latency through request throttling, replication and service-level optimizations.
- Automated issue detection, enhancing service uptime and reducing operational overhead.
- Efficiently managed in-house infrastructure, ensuring smooth deployments and system stability.

Freelancer

Software Engineer

AUGUST 2017 – SEPTEMBER 2018

As a freelance software engineer, I provided custom software development, project management and IT consulting services for local and international clients. I developed tailored web applications, business solutions and in-house server infrastructure, ensuring scalability, security and performance optimization.

Key Responsibilities:

- **Client Requirement Analysis** – Engaged with clients to understand their business needs and translated them into technical solutions.
- **Custom Software Development** – Designed web applications, business solutions and automation tools tailored for various industries.
- **In-House Server & IT Infrastructure Management** – Set up and maintained private servers, ensuring smooth deployment, security and performance.
- **Project & Delivery Management** – Oversaw end-to-end software lifecycles, ensuring timely completion, scalability and maintainability.

Key Achievements:

- Successfully delivered custom applications that met unique client demands.
- Maintained high client satisfaction, ensuring repeat business and referrals.
- Designed scalable solutions, optimizing performance and security across projects.

At Twister Media Technology Ltd., I led a team of developers and IT professionals, overseeing software development, network management and client solutions. I managed end-to-end project lifecycles, ensuring successful execution, on-time delivery and system stability. I also provided IT consulting and training, contributing to industry knowledge through lectures and workshops.

Key Responsibilities:

- **Team Leadership & Project Management** – Directed software and network projects, managing schedules, milestones and system integrations.
- **Client Requirement Analysis** – Translated business needs into tailored technical solutions.
- **Software Development & IT Services** – Delivered custom software, web applications and network infrastructure solutions.
- **Server & Network Administration** – Managed server operations, reliability and small-scale network infrastructure.
- **Training & IT Consulting** – Served as an IT lecturer at ALRA Institute and A2I training programs, mentoring future professionals.

Key Achievements:

- Successfully led and motivated teams to meet project objectives and deadlines.
- Optimized database structures using normalization techniques, improving efficiency.
- Enhanced security measures across projects, ensuring robust data protection.
- Developed a scalable network infrastructure to support organizational needs.
- Built & maintained software solutions, aligning with business goals.

VOLUNTEER EXPERIENCE

Enspiron Asia Junior Software Developer (Feb, 2014 – Aug, 2014)

Software Point Project Coordinator - Intern (Jun, 2011 – Dec 2013)

EDUCATION

B. Sc. (CSE) National University (Dhaka City College), Bangladesh.

SKILLS

Key Note	Algorithm Implementation, Virtualization, System Optimization, Technical Analysis, Cryptographic Security, DevOps.
Languages	PHP, JavaScript (Basic), HTML5 (Basic), Bash.
DBMS	PostgreSQL, MySQL, MariaDB, Redis, Elasticsearch, MongoDB.
Platforms	Apache, Nginx, Laravel, Docker, Jenkins, Git, Jira.
Others	Testing & Maintenance, Performance Optimization, System Automation, Secure File Handling, ETL Pipelines, RESTful Services, Service-Oriented Architecture, Agile Project Management, Cybersecurity, Multi-Factor Authentication, API Development, Cross-Platform System Design.

CERTIFICATIONS

Getting Started with Network Forensics	EC-Council (August 2024)
Cybersecurity for Supply Chain Management	EC-Council (April 2024)
Real-time Threat Detection with Elastic Stack	EC-Council (March 2024)
Security Automation with Ansible	EC-Council (March 2024)
Practical Linux for Security Professionals	EC-Council (January 2024)

TRAININGS

PMI-ACP Exam Preparation	PMAspire (August 2023)
ComTIA Linux+	Cybrary (Sep 2017)
ComTIA A+	Cybrary (July 2016)
ComTIA Cloud+	Cybrary (July 2016)
CCNA	New Horizons (June 2015)
Workshop on Oracle	Datapark (April 2012)
Outsourcing (Part 2) *	AIICT under A2I (2012)
Outsourcing (Part 1) *	BIDD under A2I (2011)

LANGUAGES (Vocal)

Bangla	Speak, Read, Write.
English	Speak, Read, Write.
Arabic	Read.

PERSONAL INFORMATION

Name	Mohammad Mahmudul Hasan
Gender	Male.
Blood Group	AB+.
Religion	Islam.
Nationality	Bangladeshi.
Relationship	Married.

CORPORATE SOFTWARE PROJECTS (Notable)

ATOM Store (formerly MyTelenor) - Scalable API & Monitoring System for ATOM Myanmar

Portonics Ltd.

Developed and optimized APIs powering a mobile application serving millions of users with seamless connectivity.

Contributions:

- Built RESTful APIs with a custom framework, ensuring low latency and high throughput.
- Developed real-time monitoring systems to track active users, API performance and database health.
- Automated workflows, game mechanics and data transformations using custom PHP-based framework.

Skills (Notable): System Design, Elasticsearch, Performance Optimization, Monitoring, API Development, Bash, JavaScript, MySQL, PostgreSQL, Social Media API Integration.

Aparajita Jessore - Digital Complaint Management Platform

Twister Media Technology Ltd.

Developed a centralized platform enabling citizens to report, track and resolve complaints while communicating with authorities.

Contributions:

- Implemented a complaint tracking system with role-based access control for effective issue resolution.
- Integrated SMS and email notifications for real-time status updates, enhancing transparency and communication.
- Designed RESTful APIs and dashboards for public users and administrators to manage and track complaints.

Skills (Notable): SMS Gateway Integration, Database Optimization, RBAC, JavaScript, MySQL.

BengalCrafts - Custom E-Commerce Platform

Twister Media Technology Ltd.

Developed a custom-built e-commerce platform with features for product browsing, cart management and social media integration.

Contributions:

- Built a full-featured e-commerce system using raw PHP, including dynamic product categorization and checkout workflows.
- Developed visitor and admin interfaces for seamless order processing, inventory management and customer interactions.
- Integrated live customer support and social media sharing to enhance engagement and customer experience.

Skills (Notable): E-Commerce System, Social Media API Integration, Customer Service, MySQL, JavaScript.

City Corporation Service by Khulna City Corporation (A2I)

Twister Media Technology Ltd.

Developed a web-based system to streamline municipal operations, including trade license management and estate record tracking.

Contributions:

- Implemented an online enrollment and renewal system for trade licenses, optimizing service delivery.
- Developed real-time estate tracking and structured property ownership management for better oversight.
- Built a secure, admin-only dashboard using raw PHP, ensuring lightweight performance and data integrity.

Skills (Notable): Database Management, RBAC, Public Service Digitization, JavaScript, MySQL.

Distributor (SAAS) – Scalable API & Reporting Solution

SSL Wireless

Developed a SaaS platform for distributor management, enabling product tracking, staff monitoring and automated reporting.

Contributions:

- Engineered RESTful APIs using Laravel for seamless web and mobile integrations.
- Implemented automated report generation for product tracking, staff performance and operational insights.
- Designed a centralized resource management system for product and business resource allocation.

Skills (Notable): Laravel, API Development, SaaS Architecture, Resource Management, Data Visualization, MySQL, Performance Optimization.

Dtac by Total Access Communication PLC (Telenor Group) – Scalable API & Cloud Infrastructure Management

Portonics Ltd.

Developed mission-critical APIs and optimized cloud infrastructure for Dtac's mobile and web platforms, ensuring seamless digital experiences.

Contributions:

- Engineered high-performance RESTful APIs using a custom Slim-based framework, reducing response times.
- Analyzed and optimized request-response cycles, eliminating latency bottlenecks.
- Managed AWS-hosted infrastructure to ensure high availability, scalability and security compliance.

Skills (Notable): API Development, Cloud Infrastructure Management, Database Optimization, Microservices, AWS, Elasticsearch, PostgreSQL.

Easy Recharge – Automated Mobile Top-Up Solution

SSL Wireless

Developed an enterprise solution to automate mobile top-up processes, supporting group, individual and batch recharges via third-party integrations.

Contributions:

- Established seamless third-party integrations for automated recharge operations.
- Designed background processing and scheduling systems to handle high volumes of transactions without disrupting real-time workflows.
- Implemented robust error handling and logging for monitoring and rapid troubleshooting.

Skills (Notable): API Integration, Background Task Scheduling, Workflow Automation, Laravel, SOAP, XML, MySQL, Performance Optimization.

ISP Client Record & Billing Management by Dhaka Cable Vision Ltd.

Freelancer

Developed a secure ISP management system for client records, billing automation and staff management, deployed on in-house servers.

Contributions:

- Designed a centralized system for managing customer profiles, activity logs and service history.
- Implemented invoice generation, due tracking and advance payment systems to ensure billing accuracy.
- Built a secure, admin-only web portal with role-based access control for staff administration.

Skills (Notable): Billing Automation, RBAC, Database Optimization, MySQL, JavaScript, Self-Hosting.

Patient Information Management System (PIMS)

Twister Media Technology Ltd.

Developed a comprehensive digital solution for managing patient records, doctor schedules and hospital administration.

Contributions:

- Built a secure web-based portal for efficient patient and resource management using raw PHP.
- Developed a scalable RESTful API for real-time patient data synchronization across hospitals and mobile apps.
- Implemented centralized systems for managing patient profiles, test results and appointment bookings.

Skills (Notable): RESTful API Development, Database Optimization, Healthcare Information Systems, MySQL, Secure Access.

SSLCommerz – Secure Payment Gateway

SSL Wireless

Contributed to SSLCommerz, Bangladesh's leading payment gateway, optimizing payment automation, financial reporting and merchant services.

Contributions:

- Automated QR and PDF-based payment links for streamlined transactions and multi-gateway tracking (bKash, Nagad, wallets).
- Developed advanced reporting systems for banking, settlement and financial insights.
- Built secure APIs for merchant authentication, EMI processing and automated banking reports for compliance.

Skills (Notable): Payment Gateway Development, API Security, Banking & Financial Reporting, Biometric Authentication, QR Code Payments, MySQL.

School Management System by Plan International – Digital Solution for Educational Administration.

Twister Media Technology Ltd.

Developed a web-based system to streamline school operations, covering infrastructure, student records and performance tracking.

Contributions:

- Built a high-performance school management system using raw PHP for scalability and flexibility.
- Implemented attendance tracking, result processing and guardian communication features.
- Designed a user-friendly, permission-based admin dashboard for secure school operations management.

Skills (Notable): Data Modeling, User Access Control, Education Management Systems, MySQL, JavaScript.

OPENSOURCE PROJECTS (*Notable*)

- **ArrayKit:** A PHP library for advanced array manipulation, offering high-performance operations like filtering, sorting and recursive transformations.
- **Game Draw:** A secure system for tamper-proof random draws, leveraging cryptographic techniques to ensure fairness and scalability.
- **Hosts Blackhole:** A lightweight domain-blocking tool for managing host files, blocking ads, trackers and malicious domains efficiently.
- **InterMix:** A PHP library for data interleaving and transformation, designed for structured, semi-structured and unstructured datasets.
- **OTP:** A customizable OTP generation library supporting TOTP, HOTP and secure authentication workflows.
- **Pathwise:** A file and directory management library for PHP, optimized for secure, scalable and high-performance operations.
- **Toolset:** A collection of CLI utilities for server management, system automation and diagnostics, designed for cross-platform use.

- **UID:** A high-performance UID generator for distributed systems, offering collision resistance and optimized storage.

SERVER PROJECTS (Notable)

- **DNS Server:** Configured and managed DNS servers to handle domain name resolution efficiently, ensuring fast and reliable network performance.
- **VPN Server:** Set up secure VPN servers for encrypted remote access, enabling private and protected communication channels.
- **Load Balancing:** Implemented load-balancing solutions to distribute traffic across multiple servers, enhancing application availability and performance.
- **NAS Server:** Built and maintained NAS servers for centralized file storage and secure access, optimizing data sharing and backup processes.
- **Media Streaming Service:** Deployed media streaming servers to deliver high-quality video and audio content seamlessly across devices.

NETWORK PROJECTS (Notable)

- **Router:** Configured and optimized routers for efficient data routing and secure internet connectivity across the network.
- **Firewall:** Deployed firewalls to enforce network security policies, protecting the organization from unauthorized access and cyber threats.
- **Whole Office Networking:** Designed and implemented end-to-end office network infrastructure, integrating wired and wireless networks for seamless connectivity.
